

STEEL CUT - SYNOPSIS

Introduction:

- New cut style for machining steel & cast steel materials

Features & Benefits:

- Specifically developed geometry - Increasing machining output on Steel components compared to standard & double cuts
- Aggressive cutting form - producing large chips with increased stock removal
- In excess of 35% more stock removal compared to conventional bur geometry
- Specifically engineered steel cutting geometry - generating lower heat at cutting edge
- CNC Machined - high consistent quality
- Manufactured to strict quality control standards - Incorporates 100% inspection of brazed joints
- Combination of ATA air tool with STEEL cut geometry - gives a guaranteed smoother grinding operation

Range Details:

- 9 shapes available

- 30 different diameter configurations
- 5 pcs bur kits available

Industry target:

- Construction
- Marine
- Aerospace
- Foundries

Applications

- Heavy stock removal on Steel & Cast Steel components
